## PROFESSIONAL SUMMARY

Technical Project Lead with 12+ years of experience in Kubernetes, Linux systems, and storage technologies, delivering enterprise-grade solutions across product development and QA engineering. Led 8+ member teams, managed 50+ backlog items per sprint, and improved product quality by 30%. Reduced testing effort by 23–40% through automation using Python and CI/CD pipelines. Experienced in Agile delivery, system validation, and performance testing across distributed environments.

## TECHNICAL SKILLS

- **Project & Product Management:** Agile, Scrum, Sprint Planning, Backlog Management, Roadmap Planning, Stakeholder Management
- **Technical Skills:** Kubernetes, Linux Kernel, File Systems (GlusterFS, SMB), Storage Systems (NVMe, SSD, ONTAP)
- **Automation & Tools:** Python, Shell Scripting, Jenkins, QTest, FIO, IOZONE, AJA
- **Testing & QA:** Test Strategy, Performance Testing, System Validation, Automation Frameworks
- **Other Skills:** Risk Management, Data Analysis, Documentation (BRD, FRD), CI/CD

## PROFESSIONAL EXPERIENCE

### Project Lead | Aziro (formerly MSys Technologies) | Pune | Jul 2022 – Present

- Led and mentored 8+ member cross-functional team to **validate Kubernetes-based storage systems**, improving release quality by 30% designing **TestCases for volume and cluster components for Portworx client**.
- Managed bi-weekly sprint cycles, handling 50+ backlog items, improving delivery timelines by 20%
- Designed validation frameworks **for Gluster Filesystems & SMB**, increasing test coverage by 40% and reducing defects in production
- Optimized automation test strategies for Kubernetes-based storage systems, improving test efficiency by 23% and reducing regression cycle time.
- Debugging for failure and **RCA for system crashes, node failure and disk failures**.
- Collaborated with **5+ stakeholders across global teams**, reducing requirement gaps by 25% and updating product documents.
- Defined validation architecture and environment topology for Kubernetes storage platforms, ensuring alignment with production-scale deployment patterns and high-availability requirements

### Senior Software Engineer | Cerium Systems (AMD) | Bangalore | Mar 2021 – Apr 2022

- Executed **kernel-level and Linux internals testing across 3+ OS platforms (Ubuntu, RHEL, SUSE)**
- Automated end-to-end kernel validation workflows using **Bash and Python across** Ubuntu, RHEL, and SUSE, reducing manual effort by 35%
- Enhanced **CI/CD pipeline efficiency by 20% using Bash scripting and Jenkins automation**
- Identified and resolved **15+ critical kernel defects**, improving system stability by 25%
- Collaborated with platform architects and firmware teams to troubleshoot cross-layer issues spanning hardware, kernel, and driver stacks, accelerating root-cause resolution.

### Senior Software Engineer | NetApp (MindTeck) | Bangalore | Dec 2019 – Oct 2020

- Led validation for NVMe & PCIe storage systems, improving reliability by 30%
- Developed Python-based automation frameworks for NVMe/PCIe storage validation, reducing test execution time by 40% and improving coverage
- Designed **ONTAP cluster validation strategies for distributed storage systems**, improving system performance by 25%
- Enhanced existing Python-based automation frameworks, expanding regression coverage by 35% and catching critical bugs before release, resulting in a 20% reduction in post-release bug fixes
- Developed scalable automation modules that supported cluster-level testing across distributed nodes, ensuring test frameworks mirrored real-world enterprise storage deployments

### Senior Software Engineer | Sony India | Bangalore | Jul 2011 – Jul 2017

- Engineered robust **test automation suites using Python and Bash scripts**, slashing manual testing efforts by 50% and accelerating release cycles by an average of 30% across all projects
- Built **CI/CD pipelines using Jenkins and Git**, improving deployment efficiency by 30% and reducing release cycles
- **Collaborated with global teams (Japan)**, improving delivery timelines by 20%
- Created 20+ BRDs/FRDs, improving requirement clarity and reducing rework by 25%

KEY PROJECTS

---

Portworx (Pure Storage)

- Led validation of **Kubernetes-based storage systems**, improving system performance by 30%
- Managed QA strategy for 20+ features, reducing production defects by 25%

FUNDSH (SONY)

- Developed Test scripts (**Bash/Shell**) for validating embedded board bring up and RootFile System (RFS)
- Performed Kernel Testing with open-source Framework (**LTP**) as well as **stress-ng, kselftest, plftest, ftrace** etc.
- Board bring up activities with **KZMA9, Panda, iMX6 bare-metal boards**.

SNS (GlusterFS, SMB)

- Conducted high-performance file system testing on GlusterFS and SMB clusters, improving throughput by 35% under production-scale workloads
- Pioneered a continuous integration/continuous delivery pipeline for performance testing, decreasing average test execution time by 30% and liberating engineers from manual testing

AMD Kernel Testing

- Automated fault injection using **LKDTM Kernel Module**, reducing manual effort by 40%
- Engineered custom Linux kernel builds, enabling validation testing on 15+ hardware configurations and enhanced test coverage by 30%, which averted 3+ critical bugs and automating with **Bash/Shell scripting**.

Valence Framework (NetApp)

- Built automation framework for **NVMe/SSD validation**, reducing test execution time by 40%
- Integrated QTest reporting into automation framework, improving defect tracking efficiency by 25% and enhancing test visibility.

CERTIFICATIONS

---

- IBM Business Analyst – **Mastery Award**
- **Palo Alto Firewall Training**
- **EDUCATION**

MBA – Business Analytics

Chandigarh University

B.Tech – Electronics & Communication

Tezpur University
